

# "I'm completely generated on Jelly Studio"

A 4-minute feature film in 28 independent segments, cut into every ad we need · September 1, 2026

Lady walks one bright creator loft and names the top features of Jelly! Studio, one feature per segment, each segment a complete sentence with its own visual. The long cut is a straight concat. The 15-second reels are the same segments, un-cut. **Nothing is rendered twice**, every scene is proofed as a cheap still-motion take before the premium pass, and the premium pass is **native 1080p** Seedance 2.0 on the Lady V2 lane.

**28**

segments  
8–12 s each

**260s**

**\$177**

one take, all 28  
+ \$18 proof pass

**~\$240**

all in, with 25%  
retakes — cap ask

## What the post-mortem of the first Lady V2 film changed

**"Cartoony" was never the Lady lane.** The 8-minute capability reel (Aug 26) intercut photoreal Lady clips with two Pixar-style 3D clips from the customer Vater lane (v05, v09a). Viewers graded the whole reel down. This ad contains no customer-lane footage — UI proof is real screen capture, inset in post.

**Nothing Lady has ever shipped was above 720p.** All 26 paid generations of the estate proof were 720p; the capability reel's 1080p was title cards around 720p clips. The 1440p ESRGAN upscale was rejected on the couch test ("looks about the same"). Premium here means **native 1080p**, not an upscale.

### The two best-looking shots had a different style string.

c05 and c08 were hand-switched to *"Photoreal, shot on a full-frame cinema camera, 35mm look"* and c08 scored the best identity in the project (ArcFace 0.907). That head is now the default for this ad, with the anti-CG clause that until now lived only in the character-sheet template: *"Not a 3D render, not CG, not smoothed or filtered."*

**Where the 26-for-8 rework went:** bust-only @Image1 invented her lower half (~\$9) · voice engine flipped after clip 1 (\$19) · ArcFace noise on wide frames · one prop/blocking miss each · judge pedantry. All four are now defaults in code, and this project adds a proof pass at 480p before any 1080p call.

# Premium means native 1080p. Here is why not 4K.

| fal endpoint                              | res          | \$/s           | note                                                                                 |
|-------------------------------------------|--------------|----------------|--------------------------------------------------------------------------------------|
| seedance-2.0 reference-to-video (Lady V2) | 720p         | \$0.302        | what shipped in August                                                               |
| <b>seedance-2.0 reference-to-video</b>    | <b>1080p</b> | <b>\$0.680</b> | the documented "if resolution matters" path                                          |
| seedance-2.0 reference-to-video           | 4K           | ~\$1.56        | fal's page lists only 480/720/1080; unverified; platforms re-encode to ≤1080p anyway |
| seedance-2.0 mini                         | 480p         | \$0.070        | proofing tier — every segment goes here first                                        |
| seedance-2.5 reference-to-video           | ≤720p        | \$0.473        | 30 s clips, 50 refs, no 1080p                                                        |
| Kling 3.0 4K image-to-video               | 4K           | \$0.42         | no native lip-synced dialogue → breaks the voice spine                               |
| Veo 3.1 4K with audio                     | 4K           | \$0.60         | no reference-audio timbre lock → a different voice                                   |
| Topaz upscale on fal                      | → 4K         | \$0.08         | doctrine: never upscale AI output (tested, rejected Aug 22)                          |

## Cost of the 28 segments (260 s, 9:16)

| tier                                | one take     | + proof + 25% retakes |
|-------------------------------------|--------------|-----------------------|
| 480p mini (proof only)              | \$18         | —                     |
| 720p standard                       | \$79         | \$119                 |
| <b>1080p standard (recommended)</b> | <b>\$177</b> | <b>\$242</b>          |
| 4K (if the endpoint accepts it)     | \$404        | \$527                 |

Sheet + six location plates ≈ \$3 (Gemini image). Screen captures, assembly, captions, music, endcards: \$0. Historical yield was 2.75 generations per shipped shot; with the four fixes and a proof pass the target is 1.25.

## What "premium" actually buys on a phone

Every platform this runs on (Reels, Shorts, TikTok, X) delivers ≤1080p and re-encodes. 4K costs 2.3× and is invisible after the transcode. What viewers *will* see: the cinema-camera style head, true skin texture, a consistent lit set on every cut, zero wardrobe drift, and 1080p pixels under the platform's encoder instead of 720p.

**Spend gates.** Proof pass runs under the default \$60 cap. The 1080p pass needs `CINEMA_MAX_USD` raised to the number Jared names (~\$260) and the fal balance checked first — an exhausted balance surfaces as a 403 on the storage upload, not on submit (the 6.5-hour stall of Aug 22).

# Production design — the drift-killers

## Fit jelly-a

— violet ribbed knit, black wide-leg trousers, white sneakers. Trousers, so a chest-up selfie can never be judged "top vs dress". Built Sep 1; bust ArcFace 0.944, front 0.943. Regenerate by ~Sep 26 (30-day face window).

**Refs on every generation:** @Image1 pack/jelly-a/front.png (full body, face-locked — the wardrobe anchor) · @Image2 bust.png · @Image3 identity/front.jpg · @Image4 the zone's location plate (new) · @Audio1 voice/lady-anchor.wav (timbre only). generate\_audio: true.

**Style head:** Photoreal, full-frame cinema camera, 35mm lens look, shallow depth of field, natural window light with soft fill, true skin texture and visible freckles, real fabric weight, 9:16. Not a 3D render, not CG, not smoothed or filtered.

**Identity head:** "The character in @Image1 (full-body reference — same face as @Image2 and @Image3; same outfit head to toe: <wardrobe> in every shot)." Her face, hair and age are never described in words.

**Speech:** "She says exactly: "...". Use @Audio1 as her voice and timbre reference only; she speaks the quoted line exactly once, naturally, no echo, no repeated reads."

**Tail:** "No captions, no subtitles, no on-screen text, no lettering on props or screens, no watermark."

Zone A — window

Zone B — desk

Zone D — hallway

**One set, six zones, six people-free plates** (A window · B desk · C sofa · D hallway · E doorway · F desk close), generated once with Gemini image and passed as @Image4 so 28 independent generations share one room and one light. The S01/S09 proof decides whether the plate stays (if it fights identity, the text description alone carries the room).

**Spoken-word rules.** "Jelly Studio" is safe to say. **"Tolley" is never spoken** — Whisper heard "Tolia" on the estate proof — the URL lives on the post-added endcard only. ≤22 words per line, one complete sentence per segment. Two-speaker segments (S09) are transcript-checked on *both* lines (the c05 false alarm cost \$3).

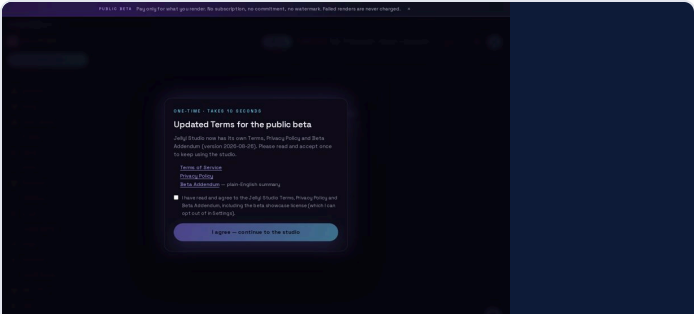

**Cut grammar.** Universal **in**: shot 1 opens on a new angle with her already mid-motion. Universal **out**: she looks into the lens, settles into a small smile, holds ~0.6 s. So any segment cuts to any other. No line crosses a seam. Adjacent segments share a zone so a hard cut reads as a new angle, never a location jump. Lower-third label ≤4 words, added in post — never karaoke.

# The 15 features, easiest to most complex, and their on-screen proof

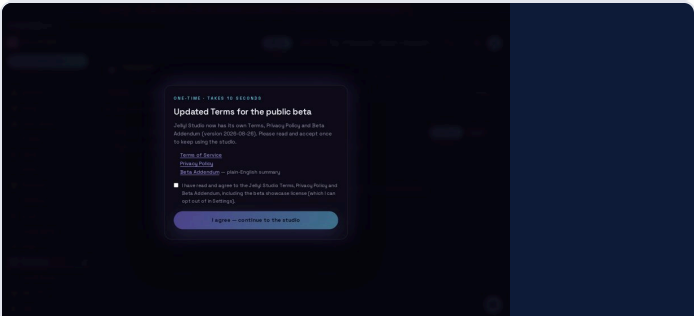

| #  | feature                          | site copy / claim                                                                  | proof on screen            |
|----|----------------------------------|------------------------------------------------------------------------------------|----------------------------|
| 1  | Pay per film                     | "Most films: \$1–7 all in." No subscription, no watermark, failed renders \$0      | pricing ticket             |
| 2  | Your script, word for word       | "You hold the pen — the studio only illustrates what you approve."                 | Script Review approve gate |
| 3  | Claude writes it                 | "Pick Fable, Opus or Sonnet — pay what the writer actually used."                  | Creator Model picker       |
| 4  | 8-step create flow               | One paid click; exact quote first; nothing renders until Generate                  | step pills → Confirm gate  |
| 5  | Your voice, cloned               | "so it still sounds like you at minute nine."                                      | Voices + Voice Tuner       |
| 6  | Selfie → art style               | upload a selfie → art style + matching character in ~10 s                          | Styles wizard              |
| 7  | Character Lab                    | "Mint a cast... without drifting." \$0.68 / 3 takes                                | Characters screen          |
| 8  | Same face every scene            | IP-Adapter scene consistency, house cast canon                                     | editor toggle + 4 stills   |
| 9  | Stills first, then motion        | "Animate only the shots that earn it. Per scene, priced before you click."         | stills grid → N × \$ modal |
| 10 | Motion transfer                  | the character copies a real driver clip, \$1.75/clip                               | driver + result split      |
| 11 | Video Editor, regenerate a scene | timeline + scene drawer; Lady regenerates herself, 25¢                             | Video Editor               |
| 12 | Thumbnails + SEO                 | thumbnails, titles, tags, chapters from your style                                 | thumbnail variants         |
| 13 | Free 9:16 shorts                 | 15–60 s, \$0, no GPU, no watermark                                                 | Shorts Library             |
| 14 | Connect 7 platforms + schedule   | YouTube, TikTok, IG, FB, Pinterest, X, LinkedIn — \$6/mo each; Post now / Schedule | Publishing + DripScheduler |
| 15 | Socials · Studios · Autopilot    | "Winning clips pulse." · ten studios per login · feeds → episode drafts            | Socials, tab strip, feeds  |

**Never on screen or in voice:** Analytics, AI Animation, Affiliate — all stub: `true in lib/vater/nav-visibility.ts`. Say "Socials shows what every clip did after it posted", never "YouTube analytics". Do not say "paste a YouTube link and get a video" — the real fork is your own script vs Jelly writes it.

**UI proof is real and free.** A read-only Playwright harness ( `tests/e2e/audit/capture-ad.mjs` ) logs in, blocks every write, and records a short video plus a full-page PNG per studio route at 1440×900 @2×. Insets are composited in post by `cinema/tools/inset.py`: 9:16 puts the UI card in the top 42% while she keeps talking below; the 16:9 master puts her 9:16 frame on the left third and the UI on the right two-thirds. One render serves both.

| Drip singles, 1/day on the Jelly Page   | any standalone segment + S28        | 16–18 s              |

All straight concats plus the 1.8 s cinema endcard (tolley.io/animate). `posted-takes.json` is the never-repeat ledger.

## Execution order

**1**

**\$0** — UI captures for every route; sheet `jelly-a` + six plates (≈\$3). *done Sep 1*

**2**

**\$1.53** — S01 + S09 at 480p mini with the plate as @Image4 → judge strips → plate on/off, negative clause on/off.

**3**

**\$18** — all 28 at mini; eyeball every strip in the gallery; transcript-check both lines on S09; patch prompts; note start: trims.

**4**

**\$177** — all 28 at 1080p, four in parallel, balance checked first. Retake only material failures (≤25%).

**5**

**\$0** — insets, assembly per cut table, 48 kHz pin, music −26 dB, labels, endcard, `chapters.json`, gallery + SMB, Telegram link.

## Verification

- Every one of 28 segments has an approved mini strip before its 1080p call.
- ArcFace mean ≥0.80 on close shots; wardrobe head-to-toe unchanged in every wide.
- Whisper ≥0.85 on all 29 lines; "Tolley" never spoken; no legible generated text in any frame.
- fprobe: 1080×1920 24 fps 48 kHz stereo on every final; 16:9 masters 1920×1080.
- Total spend ≤ the named cap; ≤1.5 generations per shipped segment.
